Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method of treating a subject having or at risk of developing a haematologic malignancy or multidrug resistance (MDR). The method involves administering hypoxia inducible factor-1 (HIF-1) binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or antisense nucleic acid molecules and SUMO-1 binding molecules or antisense molecules are useful for treating a subject having or at risk of developing haematologic malignancy or MDR (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphoproliferative disorders e.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia, e.g. angiogenic invention is used in gene therapy. The present sequence is human mdr1 dene HIF-1 binding cite num

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of treating a subject having or at risk CC of developing a haematologic malignancy or multidrug resistance (MDR). CC The method involves administering hypoxia inducible factor-1 (HFF-1) CC binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding CC molecules or small ubiquitin-like-modifier (SUMO)-1 binding CC element (HRE) binding molecules or antisense mucleic acid molecules and CC SUMO-1 binding molecules or antisense molecules are useful for treating a CC (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphoproliferative disorders CC e.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid convention is used in gene therapy. The present sequence is an antisense CC invention is used in gene therapy. The present sequence is an antisense CC oligo targetted to HRE in the mdr1 gene (mdr1-HRE) to inhibit its corporation. This oligo is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

This is a preferred fragment of the mdr-1 gene promoter, isolated human DNA. The mdr-1 promoter and enhancer elements are inducible cytostatic agents such as vincristine and adriamycin which are use cancer therapy. Vectors comprising the promoter and enhancer seque

lucible by are used in

from

Claim 2; Page 6; 7pp;

German

cytostatic

agents.

New mammalian expression vector useful for gene therapy, - comprising promoter and/or the enhancer of the mdr-1 gene which is susceptible

comprising the sceptible to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ঠ
CC This invention describes a novel method of determining cytosine CC methylation in a sample of genomic DNA which comprises treating the Sample with hydrogen sulphite so that the cytosine is converted to uracil CC whilst 5-methylcytosine remains unchanged, amplifying sections of the DNA CC using at least 2 PCR primers and studying the base composition of both CC complementary amplified strands whereby methylation status is deduced CC from the difference in molecular weight of the two strands. The method is CC used to diagnose and/or prognose unwanted side effects of medication, CC cancer, central nervous system disorders, aggression symptoms or CC behavioural disorders, clinical, psychological and social consequence of CC brain damage, psychotic and personality disorders, dementia and CC associated disorders, cardiovascular disease, malfunction, damage or disease of the gastrointestinal tract, breathing system, bone muscle, CC endocrine or metabolic system, injury, infection, abnormal development or Gexual malfunction. This sequence represents the human Mdzl DNA fragment CC amplified by the PCR primers represented in ABX94593 & ABX94594 and is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WdrI; cytosine methylation; hydrogen sulphite; diagnose; dementia; 5-methylcytosine; amplification; prognose; side effect; medication; bone; cancer; central nervous system disorder; aggression; muscle; endocrine; abnormal development; personality disorder; behavioural disorder; injury; brain damage; psychotic disorder; cardiovascular disease; infection; gastrointestinal tract; sexual malfunction; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   operably linked to heterologous genes coding for therapeutic agents are claimed. Using the vectors, the therapeutic agents (e.g. anti-oncogenes, interferon, IL-2, IL-6, etc.) can be expressed in cancer cells under the control of cytostatic agents.                                                                                                                                                                                                                                         This is a preferred fragment of the mdr-1 gene promoter, isolated from human DNA. The mdr-1 promoter and enhancer elements are inducible by cytostatic agents such as vincristine and adriamycin which are used in cancer therapy. Vectors comprising the promoter and enhancer sequences operably linked to heterologous genes coding for therapeutic agents are claimed. Using the vectors, the therapeutic agents (e.g. anti-oncogenes, interferon, IL-2, IL-6, etc.) can be expressed in cancer cells under the control of cytostatic agents. The mdr-1 promoter and enhancer elements are inducible by cytostatic agents such as vincristine and adriamycin which are used in cancer therapy. Vectors comprising the promoter and enhancer sequences operably linked to heterologous genes coding for therapeutic agents are claimed. Using the vectors, the therapeutic agents (e.g. anti-oncogenes, interferon, II-2, II-6, etc.) can be expressed in cancer cells under the control of cytostatic agents. Vectors comprising the promoter and enhancer sequences operably linked to heterologous genes coding for therapeutic agents are claimed. Using the vectors, the therapeutic agents (e.g. anti-oncogenes, interferon, IL-2, IL-6, etc.) can be expressed in cancer cells under the control of cytostatic agents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            represent specifically claimed nucleotide sequences from the present convention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells; for differentiating between acute (lymphocytic leukaemia and acute myelogenous leukaemia, as probes for lymphocytic leukaemia and acute myelogenous leukaemia, as probes for determining the cytosine methylation state and/or single nucleotide (polymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The invention relates to a novel method for detecting and differentiating between colon cell proliferative disorders associated with at least one gene or its regulatory regions. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least one reagent or a series of reagents, where the reagent or series of reagents of aistinguishes between methylated and non methylated CpG dinucleotides within the target nucleic acid. The molecules of the dinvention demonstrate cytostatic activity whilst the method may useful invention demonstrate cytostatic activity whilst the method may useful for detecting and differentiating between colon cell proliferative disorders, including cancers such as colon adenoma and colon carcinoma. The PNA (peptide nucleic acid)-oligomers are useful as probes for determining cytosine methylation state or single nucleotide polymorphisms. The current sequence is that of the genomic DNA region of the invention. This sequence is not shown within the specification but is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 46; SEQ ID NO 1; 74pp; English

(EPIG-) EPIGENOMICS

Detecting and differentiating between lymphoid cell proliferative disorders comprises contacting a target nucleic acid with at least one reagent that distinguishes between methylated and non-methylated CpG

The invention relates to a method of detecting and differentiating between lymphoid cell proliferative disorders associated with at least

Oligomers, peptide nucleic acid (PNA)-oligomers and/or isolated nucleic acids based on the sequences of the genes are useful for detecting the methylation state of all the CC GpG dinucleotides within one or more the sequences, or their complements, conditions such as diffuse large B-cell lymphoma, mantle cell lymphoma. They are also useful for detecting at least two of the medical conditions such as diffuse large B-cell lymphoma, mantle cell lymphoma. They are also useful for detecting of a predisposition to, and for differentiation of a predisposition to, consitioning of lymphoid cell proliferative disorder. This sequence consitioned genes as such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
```

The invention relates to

ω

novel method

for

predicting

the

responsiveness

Isolated nucleic acid molecules having polymorphisms in known human ge e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers for locating, identifying and characterizing the genes responsible for

Example 2;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      single nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of a subject with a cell proliferative disorder of the breast tissues to a therapy comprising analysing the methylation pattern of a target nucleic acid by contacting at least one of the target nucleic acids in a biological sample obtained from the subject prior to or during treatment. The method of the invention has cytostatic acidity, and may have a use in gene therapy. The set of oligonucleotides comprising at least two of the oligomers are useful for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) within the sequences. The methods, nucleic acid, oligonucleotide, and kit are useful for the treatment, characterisation, classification and/or differentiation, of predicting the responsiveness of a subject with a cell proliferative disorders. The method is also useful for predicting the responsiveness of a subject with a cell proliferative disorder of the breast tissues to a therapy. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO200257410-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to generation of non-human transgenic animals comprising a reporter construct for producing a detectable amount of a reporter molecule operably linked to a transcriptional regulatory nucleic acid molecule from the human CYP3A4 gene. The invention also relates to transgenic animal for analysing CYP3A4 cytochrome P450 gene regulation. The non-human mammal of the invention is useful for determining whether a compound is capable of effecting the transcription of a human CYP3A4 gene. It is also useful for determining the effect of a compound such as a xenobiotic ox steroid on the regulation of expression of the CYP3A4 gene in a human. The present sequence is 5' flanking region of human (p-glycoprotein) MDR1 gene. This sequence is used as a regulatory element in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 10200 BP; 3296 A; 1785 C; 1985 G; 3134 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes the use of irinotecan (I) or its CC derivative for the preparation of a pharmaceutical composition for CC treating colorectal, cervical, gastric, lung, ovarian or pancreatic CC cancer, or malignant glioma in a subject having a genome with a variant C allele which comprises a cytochrome p450, subfamily IIIA (nifedipine CC cytostatic activity. The therapeutic applications of (I) is improved, CC since it is possible to individually treat a subject with an appropriate CC dosage and/or an appropriate derivative of (I). Therefore, undesirable, CC harmful or toxic effects are efficiently avoided. Unnecessary and CC potentially harmful treatment of those subjects who do not respond to the CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances in the substances of the complete of the complete of the complete of the complete of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

```
its derivative for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a multidrug resistance protein 1 (MRPI) polynucleotide (II). (I) has cytostatic activity. (I) or its derivative can be used for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject, where the subject is a human (preferably African or Assian) or a mouse. The present sequence represents a sequence which is used in the exemplification of the present invention.
   Sequence 177380 BP; 58338 A; 32530 C; 31389 G;
